

Survey Number (arbitrarily assigned)

Remarks

- 1 severe contact dermatitis on hips, knees lower legs after #3; headaches throughout series "never ever have I had headaches before in my life"
- 2 numbness in foot and pain in side is explained by a bulging disk; feels confident problem is not related to shot, although initially filed a VAERS
- 3 red and itchy rash on leg lasting about 2 weeks
- 4 golf-ball sized knot in arm for over 2 weeks (local reaction)
- 5 numbness in fingers within one hour after getting shot (unknown duration)
- 6
- 7 pain in left leg and arm; pain starts at knuckle and travels to shoulder; joint pain in elbows and knees; sleep loss unexplained; feels run down since shots despite routine exercise
- 8 eczema on face; reaggravation of tendonitis in shoulder
- 9
- 10 immune system cannot seem to keep up since starting series; problems concentrating; sinus problems seemed to have worsened since shots
- 11
- 12 respondent thought heart fluctuations and burning sensation in left chest which started after #4 could be due to stress; shoulder arthritis pain could be due to previous injuries
- 13 rash with bumps all over body that flared in hot shower two days after shot; lasted 4 hours
- 14
- 15 (unknown duration or severity, remarks unclear, sounds like a local reaction)
- 16
- 17 severe pain in joints after workouts since #2 taking 2 weeks to heal; stopped working out since; knees also hurt; mild headaches have become severe (like migranes)
- 18 muscle pain and soreness continues under injection site and in tendon, starting 1-2 months after #2; feels this constantly, especially when hand is raised over head;
- 19
- 20 pain in wrists, shoulders, knees diagnosed as degenerative joint disease since #3 and #4; headaches w/i last year along with tiredness since #3; tinitus since #4; history of shoulder pain
- 21 ringing in ears and recurring headaches started after shot #2; vertigo and dizzy spells come and go since #2
- 22
- 23
- 24 extreme bruising near injection site size of tennis ball and lasted a week (local reaction)
- 25 a knot where shot was give for over 2 weeks which was tender and itched quite a bit (local reaction)
- 26 after #3 rash on back of neck, loss of energy, muscle/joint pain (unknown duration but sought medical treatment); hair loss significantly accelerated--now bald on top
- 27 (no remarks unknown duration but sought medical treatment)
- 28 "sinus" headaches few times per week for 2-3 months after 2nd shot
- 29 feels any symptoms are natural part of aging, parenthood and stress
- 30 ankle stiffness and tendonitis that respondent feels is probably due to exercise

Survey Number (arbitrarily assigned)

Remarks

- 31
- 32
- 33 ringing in ears lasts anywhere from 5 mins to a couple hours; light headedness lasts less than 2-5 minutes with no specific pattern
- 34 after shot #4
- 35 moderate local reaction
- 36 short term memory loss is severest of symptoms after #3; also hair loss after #2; diagnosed with probable Meniere's syndrome, positive tinitis, and positive HF hearing loss
- 37 deep coughs lasting a month after #3 and #4; skin rashes lasting 6 months on arms, torso, and legs after #3; feels weaker and routinely tired, nauseous and lethargic
- 38 sore arm for a week after #2, like a bee sting (local reaction)
- 39 hard time sleeping despite good diet and vitamins
- 40 occasional heart palpitations starting 1 month after #4; difficulty sleeping and constantly tired; gained weight and quit exercising; tired all the time; short term memory a problem
- 41
- 42
- 43
- 44 frequent tingling in right fingers will last for a week at a time; begun to move up hand into elbow
- 45
- 46
- 47 joint pain 4 days after 1st shot; now pain in wrists, both knees (on crutches for 3 days); shoulder, lower back and neck stiff until midday; exhausted despite exercise and good diet
- 48 skin rash worsened (unknown duration)
- 49 numbness and joint pain with each shot after #3 for 3-4 days; still having difficulty sleeping since #4
- 50 lump on eye requiring surgical removal around #4, called chalazio
- 51 joint, muscle, and foot pain that never before existed; muscle recovery from exercise takes 2-3 x longer; feet hurt after standing 3-4 hours--all started 2-3 mos after #1;"Getting older?"
- 52 arthritis is in fingers
- 53
- 54
- 55 two days after shot #5, experienced joint pain in wrist for approx two days which prohibited putting weight on hands
- 56 most pronounced is inability to sleep for last 4 months; 2 instances of vertigo within a month; a few instances of light headedness since last shot, (more)
- 57 joints in knees and elbow hurt after the shot (unknown duration) also gets real hot and skin gets clammy (unknown duration)
- 58 lots of headaches after #5 that are very hard to get rid of, involuntary muscle twitching around shot area after each shot, but shortly goes away
- 59
- 60 joint pain on and off in wrist and lower back since the shots; pain feels like slept on wrist wrong and some w/ lower back (?); feels this is might be unrelated

Survey Number (arbitrarily assigned)

Remarks

- 61 since starting series been getting sick with colds more often than before, 3 colds lasted 2 weeks each; 2 unexplained illnesses after shots with abnormal pain
62
63
64 (no remarks despite multiple symptoms)
65 multiple symptoms were noticed soon after first shot
66 numbness in hand immediately after #4 which is slowly going away; vertigo on day of shot #4
67 moderate pain and tightness in arm (injection site) that moved into chest, lasted about 12 hours
68
69
70 stiff and sore ankles when waking in morning; painful to stand, but subsides in a few minutes; lasted 3-4 months after #3, now only occassionally happens "Old age? I'm 30."
71 started having pain in ankles after #1; severe in morning and gradually decreases with use; pain has moved to knees and hips
72 rash and severe itchiness on legs and arms still persistant 8 months after #4; would be awake between 1-3 every night for entire month; mind seems to be muddled and unclear
73 headaches are slight and dull, but still frequent and annoying; significant thinning of hair in last two years with no family history for it
74 headaches and backaches; loss of energy--can sleep 8 hours and still not feel refreshed (not ordinary for respondent); has difficult time retaining details; muscle pain at shot site only
75
76
77 consistant arthritic pain in right hip ball and socket after #3; pain could be from stretch injury, but feels this shouldn't be significant enough to cause continued pain
78 fatigue started day of #4; joint pain in hands and wrists within days of #4; ANA+ with autoimmune thyroiditis; weight gain, headaches
79 doesn't seem to be as attentive and "sharp"; wife had miscarriage but says these are common
80 numbness in toes approx twice per week for 5-10 minutes; no medical problems before nor any colds for three years and now has contracted 3 colds since #2
81
82 daily headaches in morning (could be other causes); used to be very active, now can't find motivation to get out of house; memory and concentration getting worse in last 1-1/2 years;
83 severe joint pains after #5 in knees and ankles that comes and goes; headaches increased after #1; most concerning problem is vertigo and balance problems starting after #2
84
85 cellulitis and endocarditis, first cyst started developing one week after #4
86 since #1 has joint and muscle pain, loss of energy, recurring headaches, difficulty sleeping up to two weeks after each shot, noticeable balance problems, flu-ish after shots
87 headaches, body aches, fever, loss of appetite occurred every 2 mos, then every 1 month, and finally every two weeks for a period of 8 months
88
89
90 rash on arms and legs beginning a few months after #1, starts as itchy bumbs then gets bigger; woken up with severe abdominal pains twice

Survey Number (arbitrarily assigned)

Remarks

- 91 aching in knees especially when going up and down stairs; skin feels dry all the time and itchy; hair loss started after #1; #6 had a fever in arm that received injection (?)
- 92
- 93
- 94 for entire week after #2 and #3, had flu-like symptoms with constant headaches--symptoms so severe did not have energy to get off couch; still has numbness and memory loss
- 95 pain in right knee and left shoulder after #4; existing excema problem exacerbated
- 96
- 97 never been DNIF in life, seem to feel worse after #1 and #4
- 98 first five symptoms started one week after #1; pain in chest about 2 mos later; simple cold took 23 days to clear
- 99 headaches very severe with first 2 shots, seems to have diminished since; after #4 and #5 experienced vertigo over a span of a few days after shots (about 4 or 5 times);
- 100 joint and muscle pain; loss of energy; arthritis in back that was getting better until next shot and then couldn't get out of bed; 18 years TIS , told may get an MEB
- 101
- 102 joint pain in right elbow starting after #1; can't do repetitive work with right arm without having severe pain in right elbow;
- 103 excessive pain/arthritis in left arm and leg joints starting after #4; "Cause and effect--who knows?"
- 104 (no remarks despite multiple symptoms)
- 105 extreme pain in right arm shoulder joint after #1; spent 6 months on and off DNIF
- 106 ringing followed by sensation of hearing loss; toss and turn until 1:00 then wide awake at 5:00
- 107 coughing up blood; sinus problems; weight loss (20 lbs) all starting directly after #5 "Seems more than luck that all this happened after my fifth shot."
- 108 numbness in fingers when held in one position; ankles more sensitive than before; accelerated hair loss; memory loss is the most severe and frustrating
- 109 ANA+, Hashimoto's thyroiditis and pernicious anemia (too many comments to list; symptoms were progressive starting with sinus infection, then tiredness and vertigo...)
- 110
- 111 rash on chest, side torso and front of leg with #1; rashes continued with series with no history of rashes
- 112 easily nauseated during turbulence; easliy fatigued and can't seem to get enough sleep; memory loss and concentration subtle at first, but now more noticable;
- 113 arthritis in hands and dry, hacking cough lasting approx 5 days immediately after #2, #3; weight gain and fatigue; failed hearing test
- 114 joint pain after #4 lasted 2 months; difficulty sleeping after #4 which lasted one month and with #5 still occurring
- 115
- 116 in 7 years never before had hearing loss, now a failed test; feels like always tired, lacking energy to do simple things; can't remember things from one days to next;
- 117 several episodes of body aches and abdominal pain similar to initial stages of flu, usually subsiding within 1 day
- 118 after #2, began feeling soreness in knee and cramping in thigh; after driving in car for one hour, need to walk to relieve pain
- 119 one week after #5, sharp pains in left wrist (fully recovered in 1 month); random itching; 2 weeks after #5, roof of mouth bleeding while brushing which lasted one week
- 120 (no remarks)

Survey Number (arbitrarily assigned)

Remarks

- 121 joint pain accelerated by shot; diagnosed with osteoarthritis which has diminished somewhat; light headed and loss of energy may be caused by other reasons "Getting older, maybe?"
- 122 after #5 got flu and ear infection; 2 months later and 2 treatments of antibiotics it is now a eustachean tube dysfunction
- 123 itchy skin in general usually on arms, midsection and scalp; loss of energy since #2-need two more hours of sleep per night now to feel normal; memory affected now more so
- 124 itchy skin with rashes 2 weeks after #3; joint/muscle pain 2 weeks following #4 in knuckles, knees, ankles; 1/4 existing hair lost in last 6 months; reduced concentration;
- 125 after #4 severe RH shoulder pain; recurring headaches since #1; overall decline in health since 2 years ago; i.e. more frequent colds, sinus problems, etc.
- 126 numerous headaches so bad eyes and jaw/gums ache; could be due to job stress
- 127
- 128 marked tiredness, difficulty sleeping, memory loss all started within weeks of #1; can't get enough sleep despite vitamins and exercise; neck and shoulder pain for 6 mos with no injury
- 129 thought headaches are probably from being dehydrated; used to get 1 cold/year, since shot had 8-10 bad colds; one was so bad, had to get a spinal tap
- 130 developed flu-like symptoms immediately following injection, lasted 36 hours
- 131 rashes after #2 lasting 3 weeks; numbness in left leg after #3; constant tiredness; reduced concentration--mind wanders; developed epididymitis (sp?)
- 132 very sore arm at site; usually healthy (only 1 cold/flu a year) now had 3 flus already this season; could also just be a bad flu season
- 133 unknown duration
- 134 weight gain is unexplained (never had problems losing weight before); body fat continues to increase despite good diet and teaching aerobics 5x per week
- 135
- 136 pain in knees; needs more sleep to feel rested; after #4 felt lightheaded when standing up w/heart fluctuations (1 mo); once broke out in sweat with extreme chest pain for 30 mins
- 137 immediately after #4 started getting flu-like symptoms (fever, chills, tiredness, aching body) on and off for 2 months; symptoms lasted 6-12 hours, returning every 3-4 days
- 138 none of symptoms seem too severe; short term memory seems to be getting worse, along with concentration level
- 139 (no remarks despite multiple symptoms)
